Delock PCI Express x16 Card to 4 x internal SFF-8654 4i NVMe - Bifurcation

Description

This PCI Express card by Delock expands the PC by four SFF-8654 interfaces. **SSDs with e.g. U.2 interface** can be connected to these ports by using an optional cable. The card transmits PCI Express signals using the NVMe protocol.

PCIe Bifurcation

The card requires the **PCIe bifurcation** of the motherboard to split the PCIe signal in order to use multiple ports.

Note

Without PCIe bifurcation only the first SFF-8654 port of the card can be used.
